# Matching Algorithmn:

Creates bubbles based on your likes

People with similar likes will get suggestions based on previous bubbles

This way we dont need a complicated matching algorithmn we can just use human preferences

over time the algorithmn can learn to guess people who will likely match

Serious Game with the Goal of finding love / ...

Looking for companionship → ?

A is lonely

During corona times and also in general it is hard to find a partner outside of work
-> dating apps are the solution for that
-> some people even find friends through dating apps

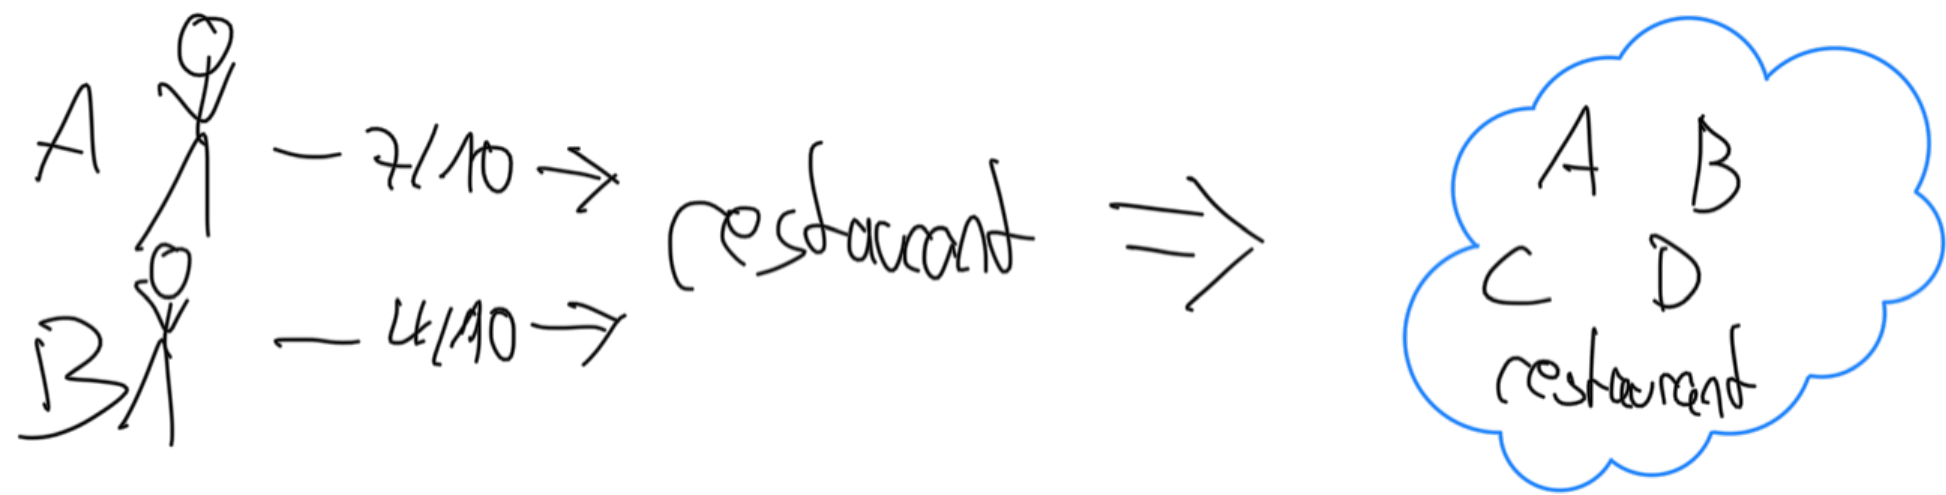

Blabla

Blabla

⇒ Date?

finding dates from normal conversation can be hard and uncomfortable
in an app everyone is looking and introductions are easier

Like horses and RnB

Looking for marriage

companionship very lonely :C

Location/Date Suggestions

App suggests locations for dates based on your location your partners location and ratings from google

if location gets a good rating by you it will be connected to your bubble and similiar people to you will get similiar date suggestions after you match

$$A + B \Rightarrow concert \Rightarrow 10/10$$

$$C + D \Rightarrow ??? \Rightarrow Suggestion: concert$$

when people match they will instantly get suggestions for dates/locations to incentivize going out and trying new locations
